Dear Sir,

<u>Accepting The Proposal for an E-Commerce website for Skanda Clothing</u>

Our management has accepted the proposal to create an e-commerce website by one of your university's student groups. An adequately built website was one of the lacking components for our business. The proposal fits our requirements perfectly, and we look forward to working with this team of young, energetic students to make this a success. The following are the requirements we agreed upon:

1. A website with a simple, modern, user-friendly, and minimalistic design.
2. List clothing items and their details
3. Ability to add items to a shopping cart and pay for them using a payment gateway.
4. The administration should be able to manage the website effortlessly.
5. The website should be accessible from any modern device(computers, smartphones, etc.).
6. There should be an option to search for products based on customer interests.
7. The website should be capable of collecting user feedback.
8. The website should have a function that generates offers and discounts randomly.

Thank you and best regards,
